

# Day, Night, Light

## Jenny Keuter

**19.12.2013 - 09.03.2014**

**Opening // Thursday, the 19.12.2013, 7 pm**

**Jenny Keuter** creates a geometrical installation, which forms a room within the structure of the greenhouse. Inside the house is a tight formation of thin thread, with different frequencies and gradients. At night-time they are illuminated, which creates another impression of colour. The installation's open structure decreases in a way the limitation between inside and outside. There is no clear front and back side, neither a fix perspective. New interpretations become possible.

**Jenny Keuter's** work visualises her artistic interpretation of spatiality. During her creative process she explores the structures and feel of lines, as well as perspective and proportion. Her work includes drawings on paper and installations in situ. The installation at *super bien!* is her first work to indirectly be affected by the local weather, which creates additional excitement from the artist's point of view.
